

Safety Never Takes a Day Off

70+ years of service in the industry has taught the employees of Pittsburgh Stage Inc. that scheduled maintenance and corrective action will greatly minimize deterioration and failure of Theatrical Lighting and Rigging Systems. To maintain peak efficiency of the systems and *budget*, proactive steps should be taken.

Our factory-trained technicians are able to provide immediate service for dozens of manufacturers' equipment. The goal of Pittsburgh Stage Inc. is to make certain your theatrical equipment provides optimal performance, longevity, safety, and affordability in your facility.

Our multi-point safety inspections include:

- Inspection of wiring and all system components
- Inspection of all rigging system components
- Properly torque cable terminations to manufacturer specifications
- Inspection and Flame-Resistance testing of curtains to NFPA 701 Standards
- Lighting System and memory battery testing and/or replacement
- Written Report detailing work performed, findings, and any recommendations

With proper maintenance it is possible to prevent failures from interrupting the programming in your facility.

Top Ten Safety Countdown From Our In House Experts

10. Do not overload arbors or battens.
9. Always have a spotter when flying counterweight rigging.
8. Maintain a clear stage.
7. Properly train all personnel on function of equipment.
6. Replace safety and index lights when needed.
5. Make sure all hand lines are tied tight and are in good working order.
4. Always secure lights to battens per manufacturer specifications and make sure safety cables are installed.
3. Do not use counterweight rigging to fly live loads. Flying of actors should only be performed by trained personnel on specified equipment.
2. Check and recheck. It is cheaper to make sure a load is properly secured or a light is plugged in correctly vs. issues resulting from an accident or injury.
1. Have yearly inspections and maintenance performed by trained personnel.
