

The Shape of Sound

This sweeping acoustical system was built for the new Quaker Valley Middle School Multi-Purpose Space, and proves to be not only functional, but a definite statement in form as well. This design was quite large for a middle school and was comprised of two main sections, an acoustical shell on the stage and acoustical clouds in the auditorium.

The custom fit curved acoustical shell and acoustical clouds were constructed in-house by Pittsburgh Stage Inc.'s master woodworkers.

The twenty-six 7ft x 8ft acoustical clouds were installed in a series of arcs radiating from the top of the eighteen panel acoustical shell. Each of the 12ft x 24ft rear acoustical shell panels were installed in an overlapping pattern to give the shell more of a three dimensional feel. Due to the size of the shell, each panel had to be constructed in modules, pre-fitted in-house, and then assembled on site.

One of the biggest challenges proved to be the installation of the floating acoustical shell panel above each rear stage door. Modifications of the mounting design had to be made in the field then certified on site by our Senior Project Manager.

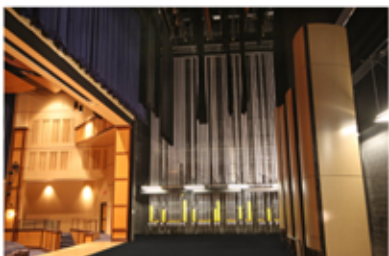

The ability to cope quickly and efficiently with the fluidity of a construction environment showcases the experience of our highly trained installers. With this job, Pittsburgh Stage Inc. has once again proven that it is bringing individual and customized fitting of acoustical systems at an affordable price.

Dead Hung Dangers

It's a myth that only counterweight rigging requires annual maintenance. Dead hung (non-moving) rigging also requires regular safety inspections.

Although this type of rigging appears not to move, there are in fact many stresses placed upon this type of system.

Installation or removal of lighting equipment, moving of curtains on the tracks, even motorized equipment like HVAC units on the roof can cause movement and vibration within the rigging. These vibrations loosen terminations, bolts, and any other type of connection.

The safest approach is to have an annual safety check performed by trained professionals.
